-----------	-------	-------	--------

25-Hydroxy vitamin D represents the main body reservoir and transport form. Mild to moderate deficiency is associated with Osteoporosis / Secondary Hyperparathyroidism while severe deficiency causes Rickets in children and Osteomalacia in adults. Prevalence of Vitamin D deficiency is approximately >50% specially in the elderly. This assay is useful for diagnosis of vitamin D deficiency and Hypervitaminosis D. It is also used for differential diagnosis of Rickets & Osteomalacia and for monitoring Vitamin D replacement therapy..

<10	ng/ml	deficiency
10-20	ng/ml	insufficiency

Investigation	Observed Values	Units	Biological Ref. Interval
Glycosylated Haemoglobin (HbA1c)	5.2	%	4.0 - 7.0

Interpretation:

HbA1c %	Degree of glucose control
> 8	Action suggested due to high risk of developing long term complications like Retinopathy, Nephropathy, Cardiopathy and Neuropathy
7.1 - 8	Fair control
< 7	Good control

- Note: 1. A three monthly monitoring is recommended in diabetics.
2. Since HbA1c concentration represents the integrated values for blood glucose over the preceding 6-10 weeks and is not affected by daily glucose fluctuations, exercise and recent food intake, it is a more useful tool for monitoring diabetics.
